# Three Bears

by Erin Ryan

Did you know that there are eight different kinds of bears found around the world?

Three very different ones are polar bears, grizzly bears and Giant Pandas.

Polar bears live in the Arctic Circle, near the North Pole.

Polar bears stay warm in very cold temperatures because they have a layer of fat, called blubber, and because they are covered in two layers of fur. Polar bears are excellent swimmers and have short claws to help them walk across ice and snow. Polar bears mostly eat seals, but they will eat other arctic animals as well.

Grizzly bears can be found in Asia, Europe, and North America. Grizzly bears like to eat plants, mammals and fish. They can run over thirty miles per hour. Even though grizzly bears are very big and strong, their cubs only weigh one pound when they are born.

The Giant Panda lives in China and has black and white fur.

This bear eats up to thirty pounds of bamboo every day. The Giant Panda is an endangered animal because many of the forests where they live have been destroyed. Many people work hard to protect Giant Pandas.
